University Ayurvedic College & Hospital, Rajkot-Bhavnagar Highway, Kasturbadham, Rajkot – 360020, Gujarat, India, ²Professor & HOD, Shalyatantra, Mahatma Gandhi Ayurved College Hospital and Research Centre. Salod (Hi) Wardha, Datta Meghe Institute of Medical Sciences, Wardha

Abstract

Background: Hemorrhoids or piles are a common ailment among adults. More than half of men and women aged 50 years and older will develop hemorrhoid symptoms during their lifetime. This disease Gudarsha comes under the heading of Mahagada, as it is Dirghakalanubandhi, Dushchikitsya in nature, Tridoshaj and involves the Marma and it is well known for the chronicity and difficult to treat.

Aim & Objectives: To evaluate the effect of local application of Palash Kshar Ointment in Management of Abhyantar Gudrsha.

Methodology: The study is prospective randomized controlled clinical trial. Total 60 patients will be selected for this study, which will be further divided randomly into two groups. Each group consists of about 30 patients. In which group A, will be trial groups and group B will be control groups. Every patient will be observed at regular follow up. On 7th, 14th, 21th, 28th Day. Results– Results will be drawn from the observations of objective parameters. Conclusion – Conclusion of the study will be drawn on the basis of statistical data calculated from the collected data.

Keywords: Internal Haemorrhoid, Abhyantar Gudarsh, Palashkshar Ointment, Palash Kshar.

Introduction & Rationale

According to Acharya Sushruta, due to Hetu (like Viruddha – Aahar, Adhyashana, Stree- Prasanga, Utkatasa, Prustha – yaan, Veg – Vidharan etc.) Dosha Prakop occurs. The main Hetu is Mandagni, which is mentioned as ‘Visheshto Mandagne’. These prakupeet Doshas alone or all together with or without Rakta, enters in the pradhan Dhamani (main channel), go downward and reach at Guda. By vitating the Gudavalies, Produces the Mansa-Prarohas are known as Arsha¹. The management of abhyantar Gudarsha i.e. Internal haemorrhoid is mainly divided in four types:- Bhashaj Chikitsa (Medicinal Treatment), Ksharchikitsa, Agnikarma (Cauterisation), Shastrakarma (Surgery).

In application of Kshar, intervention of doctor is necessary and compulsory. To make the process convenient for patient to apply the Kshar at internal haemorrhoid and to avoid doctor’s intervention for application of Kshar, Concept of application of Kshar by patient himself is presumed and for this purpose the Ointment of Kshar is preferred.

Therapeutic treatment of haemorrhoids ranges from dietary and lifestyle modification to radical surgery, depending on degree and severity of symptoms.²,³ The primary objective of most topical treatment aims to control the symptoms rather than to cure the disease. The number of topical preparations contains various ingredients such as local anaesthesia, corticosteroids, antibiotics and anti-inflammatory drugs.⁴ No radical topical is available. Hence radical non surgical treatment
form of topical ointment is need of time.

Although effective but traditional Pratisarniya
Kshar karma is more complex and tedious process.
So modification in it is necessary. Kshar ointment is
modification of Kshar Pratisaran. Previous study with
Yava Kshar ointment was done. Siktha tail is previously
used as a base for Kshar ointment preparation is proven
safe and effective as a base\(^4\). This showed encouraging
results. But Yava Kshar is difficult to prepare and also
expensive. Palash kshar is used as Pratisarniya Kshar
at many places and is very effective.\(^4,5\). Hence
Palash Kshar is used in current study in place of
Yava Kshar. Palash Kshar ointment which is an ointment of Palash
Kshar with base Siktha taila is modified technique for
Ksharkarma which will be used in current study.

**Purpose of the study:**

1. Number of patients for per rectal bleeding
second to internal haemorrhoids are more. Topical
ointment as a radical treatment is not available hence its
complete study is necessary and feasible.\(^6,7\).

2. Palash kshar is used from years as a Pratisarniya
kshar for management of internal haemorrhoids.
Hence it is ethical to use Palash kshar Ointment in the
management of internal haemorrhoids.

3. In application of kshar, intervention of doctor
is necessary and compulsory. To make the process
convenient for patient to apply the Kshar at internal
haemorrhoid and to avoid doctor’s intervention for
application of kshara, concept of application of Kshar
by patient himself is presumed and for this purpose the
Ointment of Kshar is preferred.

4. Haemorrhoid is disease associated with per
rectal bleeding which is one of major reason for anaemia
and ultimately blood transfusion. Many patients refuse
for surgery due to their personal reasons and wants
conservative management. So interest is developed in
radical management of internal haemorrhoids using
local application of Kshar ointment

**Objective**

To study effect of Palash Kshar Ointment in
management of Abhyantar Arsha.

**Research Question**

Whether Palashkshar ointment is effective in
Abhyantar Arsha Chikitsa to reduce per rectal bleeding
and size of internal haemorrhoids?

**Hypothesis**

Hypothesis of this PhD thesis will be -

**Palash Kshar** ointment applied locally at internal
haemorrhoids once a day for 14 days is effective in
reducing per rectal bleeding and degree of internal
haemorrhoids.

**H_0** = Palash Kshar ointment applied locally at
internal haemorrhoids once a day for 15 days is not
effective in reducing per rectal bleeding and degree of
internal haemorrhoids.

**H_1** = Palash Kshar ointment applied locally at
internal haemorrhoids once a day for 15 days is effective
in reducing per rectal bleeding and degree of internal
haemorrhoids.

Figure 2 Flow diagram of Clinical Study

Methodology

1] Type of Study Design :-
Randomized open labelled controlled clinical study

2] Location Of Study :-
Clinical Study : - Patients will be randomly selected from the OPD of the Dept. of Shalya Tantra of M.G.A.C.H & R.C. Salod (Hirapur), Wardha. A written informed consent will be obtained by counseling the patients of Arsha (Internal Haemorrhoids) for participation in the study. The selection of method of patient will be Lottery method of Simple Random Sampling.

Drugs : - Drug Name : - Palash (Butea Monosperma)

Part used - The leaves, Flowers, Seeds, gum and stem. The parts will be collected in their respective Dravya-Graham Kaal. The trial drugs will be collected from the local area and certified by Foundation for Revitalisation of Local Health Traditions, Banglore (FRLHT) and the Standardisation of Palashakshara will be done in Pharmacy of the Institute of M.G.A.C.H & R.C. Salod (Hirapur), Wardha.

3] Duration of Study : - In the schedule of Ph.D course. (3 year)

4] Plan of study : -
A) Kshar ointment

1) Preparation of ointment base Siktha Taila

2) Preparation of Ointment.

a. Preparation of Palash Kshar Ointment base Siktha taila i.e. Palash Kshar 1 part and Siktha taila 5 part.

Methodology

The study is prospective randomized controlled clinical trial. Total 60 patients will be selected for this study, which will be further divided randomly into two groups. Each group consists of about 30 patients. In which group A, will be trial groups and group B will be control groups.

Selection criteria for patients:

· The patients having clinical symptoms
of internal hemorrhoids will be included in study irrespective of sex, religion, diet habit.

- Patients having age between 21 years to 70 years.
- The patients of II\textsuperscript{nd} and III\textsuperscript{rd} degree internal haemorrhoids will be included in this study.

Rejection Criteria for patients:

- The patients of piles having previous history of haemorrhoidectomy.
- Pregnant woman will not include in this study.
- Patients taking other treatment from any pathy for the same problem during clinical trial.
- Patients who are suspected of serious systemic disease i.e. DM, TB, malignancy, Syphilis or having portal obstruction
- Patients Suspected of carcinoma of rectum, proctalgiafugax, chron’s disease, fistula in ano & where it is contraindicated
- Patients with severe anaemia i.e haemoglobin less than 5%

Withdrawal Criteria for patients:

- The patients not following protocol of study.
- Patients requiring emergency treatment or surgical treatment or other treatment
- Patients not ready to continue treatment.

Treatment allowed for patients:

Patients requiring treatment for hypertension or other life saving activity

Haematenics, Blood transfusion.

Any short term treatment not more than 5 days for sudden onset disease like fever, which will not disturb protocol of study.

**Methodology**

**Group A : Study Group**

Local Application of *Palash Kshar* Ointment with Pathya

**Group B : Control Group**

*Palash Kshar Pratisaran* with Pathya

**Pathya for both Groups**\textsuperscript{6,7}

- Hot sitz bath twice a day
- Advice the patient to keep the local site hygienically clean.
- Laxative – Avipattikar Churna 2-6 gm at bedtime with lukewarm water (Dose will be adjusted as per requirement of patient. when constipation waill not be relieved dose may be increase).
- Dietary control will be advised.

**Treatment of subject**\textsuperscript{6}:

**Period**

**Group A : Trial Group** - Once a daily for 14 days.

**Group B : Control Group** – Once a week for 4 weeks

**Dosage for both groups** – as required depending upon surface.

**Dosage schedule** – After defecation in morning once a day.

**Route of administration** – Topical (Locally on internal haemorrhoids)

**Procedure for local application of Palash Kshar ointment**\textsuperscript{8}:

Patient will be taken for local application after Hot sitz bath patient will be given lithotomy position i.e the patients is positioned supine comfortably with the knees flexed and abducted and buttocks projection well over the edge of table. The legs should be flexed at the hips and knees. Then local application at haemorrhoids will be applied. After that, a sterile pad kept at the anal verge to avoid soilage of clothes.

**Procedure for local application of Palash Pratisarniya Kshar**\textsuperscript{6}:
Patient will be taken for local application after Hot sitz bath patient will be given lithotomy position. The *Kshar karma* will be performed with the help of slit-type proctoscope under local anesthesia. *Kshar* will be applied on internal hemorrhoids one after the other. After application on each hemorrhoid, the applied *Kshar* will be cleansed with lemon juice after changes in colour approx one to three minute. Yashtimadhu ghruta is applied over haemorrhoids. After that, a sterile pad kept at the anal verge to avoid soilage of clothes.

**Assessment –**

**Gradation of Internal Haemorrhoids** (As per Goligher):

**I** - Haemorrhoids projecting slightly in lumen of anal canal, when veins are congested at defecation.

**II** - Haemorrhoids prolapse out of the anus on straining, but return spontaneously to the anal canal when motion has been passed and the defecation has ceased.

**III** - Haemorrhoids prolapse but don’t reduce spontaneously and remain prolapsed afterwards and have to be replaced digitally.

**IV** - Completely irreducible haemorrhoids, usually are long standing and acquire a component of skin.

**P/R Bleeding grade:**

**I Grade** – 0 to 5 drops

**II Grade** – 6 to 15 drops

**III Grade** – 16 and above drops

**Discharge:**

**Severe** - Changing sanitary pads or cotton pads minimum 2 times a day

**Moderate** - Changing of pads once a day only

**Mild** - No requirement of pads

**Nil** - Area is completely dry

**Complication Assessment**

To assess anal pain:

**Severe** - To relieve from pain, analgesic injections are required/Pain or discomfort dose not reduce after oral analgesics.

**Moderate** - To relieve from pain, oral analgesics are required.

**Mild** - Feeling discomfort within tolerable limit, no requirement of analgesic either orally or in other route.

**Nil** - No discomfort in any manner in the site, no analgesics.

**Tenderness standard assessment**

**Severe** - Patient feeling pain by touching perianal area. Not possible to perform P/R examination.

**Moderate** - Little finger P/R can be done, patient feeling very much tolerable pain

**Mild** - Index finger P/R done with very much tolerable pain

**Nil** - Index finger insertion to anal canal without any pain or discomfort

Every patient will be observed at regular follow up. On 7th, 14th, 21th, 28th. For visual recording the regular photographs of selected patients from each group will be taken for observing the local changes at internal haemorrhoid.

Routine investigations of all patients and some specific investigations will be carried out as and when required

**A. Lab Investigations**

Laboratory Investigations will be carried out before including the patient’s under the study to rule out any other pathological conditions

- **Routine Hematological Investigation –**
  - Complete Blood Count
  - Random Blood Sugar
  - Urine Examination - Routine & Microscopic
b. Stool Examination - Routine & Microscopic

c. Biochemical Examination –

d. Histopathological Investigation

Criteria for assessing the Result:

Completely Cured: Complete relief in all parameters

Improved: Improvement in 1 or 2 parameters

Uncured: When there was no improvement in any parameter.

Complication: When there was any complication due to hypersensitivity reaction to ointment (i.e. Itching, Severe pain, infection)

Observation

Maintained records & analyzed data collected after the study will be the source of observation & results drawn consequently will be discussed in the dissertation.

Statistical Analysis

Statistical Analysis will be done on observed results irrespective of sex, religion, socio-economic status, occupation, etc.

The confidence limit will be fixed at 95% and the level of significance will be at 5%. Paired and unpaired 't' test will be applied for objective parameter and chi square test will be applied for subjective parameter. If required Mann Whitney U test may be applied for subjective parameter.

Discussion

After obtaining the analyzed data Discussion will be done according to Ayurvedic and Modern text will be done.

Conclusion

On the basis of available literature, observations & discussion conclusion will be precisely drawn and whole dissertation work will be summarized in the final dissertation.
